

**Bespoke laminations
available, call us for details**

cbak™ is our range of closed cell foam mounting material specifically engineered for corrugated post print. Designed to reduce the height of photopolymer printing plates, the flexible mounting material allows printers to achieve:

- Consistent ink coverage
- Reduced dot gain
- Less fluting on corrugated substrates
- Excellent imaging on complex print jobs

cbak™ has excellent memory and re-bound characteristics enabling you to print with reduced pressure settings prolonging the life of the printing plate. High quality PE foam, cbak™ is water and solvent resistant and dimensionally accurate across the web eliminating high and low spots. With high press speeds and long demanding print runs; cbak™ is engineered to stand up to the ever increasing demands on today's printers.

- Available in 7 thicknesses ranging from 0.8mm to 4mm
- Fixed adhesive eliminating stretch
- cbak™ can be supported by PET up to 1650mm in width and any configuration
